

Vampire Make Up

We Recommend:

Aquacolor or Supracolor in White #70,
Ivory or Porcelain #406

Eyeshadow or Aquacolor in Purple

Black eyeliner pencil or liquid

Vampire Denture Kit

Blood capsules or Global Paint in Red.

Technique:

- A simple light application of white Aquacolor using a latex sponge will lighten the skin for a deathly glow. Remember that less is more – skin tone should still be visible.
- Colours can be used to dramatically highlight the eyes – dark shadows across the lid, heavy eyeliner and mascara will emphasise your hypnotic stare!
- For the guys, a moustache is very dashing – we recommend crepe hair and spirit gum, but perhaps you could consider growing your own?
- One thing is essential to all Vampires – very long, very sharp incisors! We have some excellent Fangs to get your teeth into, but they must be applied correctly for maximum effect!

TO APPLY “BILLYBOB” DENTURES:

1. Place thermal fitting beads in a cup of boiling water.
2. When beads turn transparent, scoop together using a spoon.
3. Using your fingers, mould the clear beads into a worm shape.
4. Place worm firmly into trough of dentures.
5. Place dentures in your mouth, pushing firmly until your teeth hit the bottom.
6. Once a firm impression has been made, gently remove teeth with a wiggly motion and leave to set for 10 minutes.

***WARNING – Do not leave teeth in your mouth for more than 1 minute during the fitting process and do not let fitting beads cool in your mouth.**

7. Trim off any excess plastic and your dentures are now ready to use.

8. Putty can be re-used several times, just reheat in boiling water.

NOT FOR USE ON CHILDREN OR OVER BRACES OR CAPS.
